

Big 60 Canyon V5A4 III***

APPROACH: 1 hr 45 min from Forbes hut
DESCENT: 3-4 hrs
EXIT: 1 hr to Forbes hut
TOTAL TIME: 6-7 hrs

LENGTH: 350m approx
ELEVATION LOSS: 200m approx
FLASH FLOOD DANGER: High

Big 60 Canyon Creek:
-44.074681, 169.611802

Canyon Entry: TR side at roughly 720-750m elevation. Abseil in from a good looking tree, can be between 30m and 60m high.

2 Options on R8: Use the V thread (or mates shoulders) to gain access of the rock TL of waterfall edge. From there you can use this anchor, or the one further TL with the roomy ledge. The 2nd anchor is great for getting the whole team into the sun and is a slightly better pull down.

Disclaimer: No responsibility or liability is taken for any harm, death or loss of property resulting from this documents use. Topo features, descriptions and notes may not be accurate and could be misleading. You must carry anchor building materials, be experienced, and use your own judgment when canyoning, especially in this canyon. Flooding events can strip anchors and change the layout, features and conditions. Insufficient experience may result in death!
