

# Knobs Flat Creek – V4A2III

## Eglington Valley, Fiordland

Approach: True left, steep, up to roughly the 700m contour. Some nice abseils with a good water level. Descent notes recovered from the depths of Dan's hard drive...

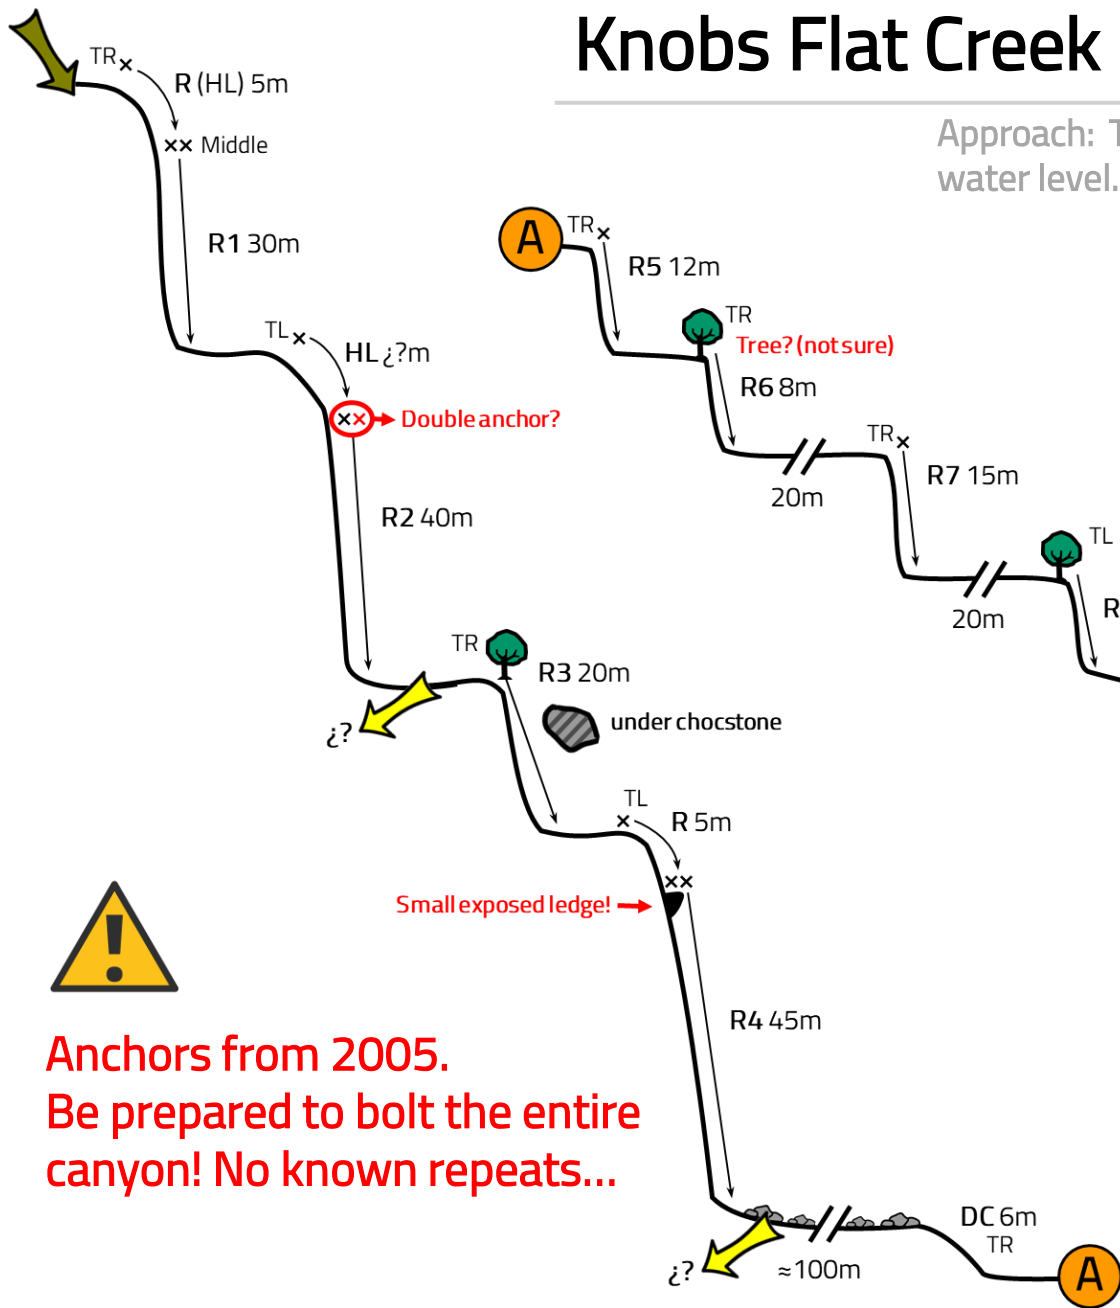

Park at the campground, cross the river and the swampy flats, then head for the canyon. The final waterfall is visible at the base of the flats/mountain. Climb canyon left (to the right of the creek on the way up). Stick reasonably close to the creek, you'll have a good view of the 45m waterfall as you ascend.

Once past the viewpoint, the terrain becomes steep. We climbed a small bluff, trending away from the creek but staying relatively close. Upon reaching a high point at the ~750m contour, track back toward the creek, slowly climbing down to meet the water at approximately 715m.

*Knobs Flat Creek below Largs Peak, intimidating, with potential.*

**Anchors from 2005.  
Be prepared to bolt the entire  
canyon! No known repeats...**

Explored by Alain Rohr and Antoine Chabanais (2005), first descent.  
Topo by José J. Pintado J. based on [published text](#) (unvisited!).

**WARNING:** It would be reckless to descend a canyon based solely on the data contained in this document and without prior experience. The author of this document is not responsible for any type of incident resulting from the interpretation of this data. **For any questions or much-welcome suggestions regarding this topo, please write to [jojapinjal@gmail.com](mailto:jojapinjal@gmail.com)**
